

ANKITA BHADANE

DEVOPS / CLOUD ENGINEER

+91 7972054203 | ankitasudhakarbhadane@gmail.com | Nashik, Maharashtra | linkedin.com/in/ankita-bhadane-370ba5152

PROFESSIONAL SUMMARY

Cloud/DevOps Engineer with 6 years of experience designing and automating AWS and Azure infrastructure using Terraform, GitHub Actions, and Docker/ECS. Proven track record cutting manual provisioning effort by automating infrastructure with modular Terraform, building CI/CD pipelines, and running production monitoring with CloudWatch, Grafana, and Datadog. Builder of CloudCostLens, an open-source Terraform cost-review toolkit that brings FinOps visibility into IaC pull requests. Strong background in incident management, disaster recovery, and cloud security (IAM, KMS), with a growing focus on infrastructure automation and reliability engineering.

TECHNICAL SKILLS

Cloud: AWS (EC2, ECS, Elastic Beanstalk, S3, RDS, VPC, IAM, CloudWatch, Route53, CloudTrail); Azure (VMs, Intune, AD, Monitor)

Infrastructure as Code: Terraform (Modules, Remote State, Terraform Cloud)

CI/CD: GitHub Actions, Jenkins, AWS CodePipeline

Containers & Orchestration: Docker, AWS ECS; foundational Kubernetes

Monitoring & Observability: AWS CloudWatch, Grafana, OpenTelemetry, Datadog, Nagios, PRTG

Programming & Scripting: Python, Bash, PowerShell, Node.js

Databases: Aurora PostgreSQL

Security: IAM Policies, AWS KMS, Network ACLs, Security Groups, Intune Device Security

Version Control: GitHub

Other DevOps Tools: JIRA, ServiceNow, Confluence, ITGlue, FreshService

Hosting & Systems Administration: cPanel/WHM, Plesk, DNS Management, SSL, Backup Systems (Datto), Microsoft 365 Administration, Windows Server 2012-2022, Linux (Ubuntu, CentOS)

PROFESSIONAL EXPERIENCE

Aress Software and Education Technologies Pvt. Ltd. | Nashik

Cloud / DevOps Engineer | September 2020 - Present

- Designed and deployed secure, scalable AWS and Azure infrastructure using modular Terraform and cloud best practices, standardizing environment builds across projects.
- Automated infrastructure provisioning with modular Terraform (remote state, reusable modules), reducing manual setup time by 40%.
- Built and maintained CI/CD pipelines using GitHub Actions to automate application deployments and reduce manual release effort.
- Managed core AWS infrastructure - EC2, ECS, S3, RDS, VPC, IAM, CloudWatch, Route53, and CloudTrail - supporting production workloads.
- Migrated application workloads from AWS Elastic Beanstalk to ECS, modernizing the deployment and container orchestration approach.
- Implemented monitoring and observability across cloud and application environments using CloudWatch, Grafana, OpenTelemetry, Datadog, Nagios, and PRTG.
- Designed and supported disaster recovery, backup/recovery, and high-availability strategies to protect infrastructure resilience.
- Enforced access control and data protection using IAM policies, AWS KMS, and Network ACLs, and maintained infrastructure documentation for compliance.
- Administered Aurora PostgreSQL databases supporting customer-facing data operations.
- Owned incident management and root cause analysis via JIRA and ServiceNow, ensuring SLA compliance across production incidents.

- Administered web hosting infrastructure (WHM/cPanel) and Microsoft 365 environment (mailbox management, Intune device security, user onboarding/offboarding), optimizing uptime and resource use for client environments.

PROJECTS

CloudCostLens - Open-Source Terraform Cost Review Toolkit

- Built an open-source toolkit that brings cost visibility into Infrastructure-as-Code workflows, addressing unexpected AWS billing after Terraform deployments.
- Developed Terraform Cost Reviewer, which parses Terraform plan output and estimates monthly AWS cost impact for creates, updates, and deletions before merge, covering EC2, RDS, S3, EBS, ALB, NAT Gateway, and Auto Scaling Groups.
- Automated cost analysis delivery directly on pull requests using GitHub Actions, posting current vs. projected monthly cost, cost delta, resource-level breakdown, and optimization recommendations.
- Built flexible deployment options (GitHub Action, CLI, Docker container) with an offline mode for demos/testing without requiring AWS credentials, using Node.js automation and AWS pricing APIs.
- Applied FinOps principles to bring cost awareness into the infrastructure review process alongside standard code review.

CERTIFICATIONS

- AWS Certified Solutions Architect - Associate
- Microsoft Certified: Azure Fundamentals (AZ-900)
- Microsoft 365 Certified: Fundamentals
- cPanel Professional Certification

EDUCATION

- Bachelor of Engineering (B.E.), Information Technology - NDMVP's KBTCOE, Nashik | 2017-2020
- Diploma, Information Technology - K. K. Wagh Polytechnic, Nashik | 2014-2017

ACHIEVEMENTS

- Recognized three times as "Performer of the Month" for excellence in service delivery and problem-solving.
- Awarded "Employee of the Year."
